NEOS

## **NEOS - design your wellness**

**LightUp NEOS is an innovative lamp concept. We took a peek at the automotive industry and were inspired by the idea of equipping a lamp with precisely the functions the customer wants. A lamp that is at once both classic and innovative, in a durable design but still with its very own expression. A lamp that stands proud. Whose materials have the least possible impact on the environment, and which does not come with parts that will never be used. A lamp that is flexible, individual and at home in many different settings. And also boasts a durable, classic design in a style inspired by industry and with a distinct retro feel. With a colour spectrum that provides many possibilities.**

**Available features:**

Asymmetric light scattering

CCT (correlated colour  
temperature) 3000-6500K

Adjustable luminous intensity in 4 steps

Timer 2, 4h and 9h

Qi (wireless charging)

USB charging

*"The way I see it, lamps with a great deal of technology often look like spaceships. I wanted to create a lamp that actually looks like a lamp – a design that can stand the test of time, both visually and environmentally. At the same time, it was important to capture the user's needs and create flexibility."*

**Designer Peter Mattisson**
