

Singapore

LightUp was developed for the aware, active and sustainable workplace. For increased well-being and greater flexibility.

LightUp Singapore is a stylish and neat desk lamp with numerous smart technical functions. Singapore has a Qi charger in the base as well as a USB port for charging. Both colour temperature and light intensity can be adjusted according to your needs, and Singapore also has a built-in timer function. For ease of storage and moving, Singapore folds up flat and takes up little space. This is to facilitate, for example, an activity-based office with a "clean desk philosophy" and enable individual lighting for increased well-being and concentration.
